

Legacy Field-Fabricated Systems

In May 2019, we introduced our new and improved [field-fabricated installation systems](#) that are fully integrated back-drained and ventilated systems, with an optional [continuous insulation](#) component. Since the onset of the new systems, we have renamed the previous 1-Piece, Tight-Fit Molding and Clip & Caulk systems as "[Legacy Versions](#)" of our systems.

Our original plan was to phase out the "[Legacy](#)" 1-Piece, Tight-Fit and Clip & Caulk installation systems, BUT because you love them so much we decided to keep them around!

These [Legacy Field-Fabricated Installation Systems](#) are ideal for various architectural features, as well as when building codes do not require the high performance as designed in our new and improved back-drained and ventilated systems.

Legacy 1-Piece, Tight-Fit Molding System

Legacy 1-Piece, Tight-Fit Installation system makes panel installation easy using our durable 1-Piece moldings. A traditional, yet high-tech appearance is obtained at an affordable cost. Both "H" and "Reveal H" moldings are available providing two different design options for the panel joints. Unique effects can also be obtained by combining various Laminators' installation systems.

Features & Benefits

- Durable and maintenance-free - since the extrusions are designed to encapsulate sealants, there are no exposed sealants and no maintenance
- Panel installation time is greatly reduced because [Omega-Lite®](#) can be erected immediately after the sheathing crew has finished prepping the wall
- Versatile - [Omega-Lite](#) can be perfectly formed to meet every need
- NFPA 285 compliant for multi-story buildings

Legacy Clip & Caulk System

Legacy Clip & Caulk installation system gives you the rout and return "look" without the hassle of prefabricating the panels, greatly reducing the total installed cost. This easy, field-proven method is the choice of architects and installers who are looking for a very flat look without visible fasteners. Panels can be cut on-site with few peripheral accessories needed for installation.

Color-matched caulk gives a beautiful monochromatic look, while contrasting caulk can be used with eye-pleasing results. Clip & Caulk looks great in combination with masonry, glass, 1-piece extruded molding systems, or by itself in a stand-alone application.

Features & Benefits

- Cost-effective, yet attractive finish
- No visible fasteners
- No prefabrication required
- Cut panels on-site with standard carpentry tool
- Color-matched panels, caulk, and flashing are available
- NFPA 285 compliant for multi-story buildings
