

# CLEANING PANELS

It's always important to keep hard surfaces germ and dirt free. Cleaning and maintaining your Laminators' panels is simple and economical!

## What you'll need:

- Soft, color-free and lint-free cloth
- Solvent(s) of your choice—alcohol, mineral spirits, naphta and xylene

### Cleaning Panels Prior to Graphic Application (If Applicable)

- ✓ Clean panels with a soft, color-free and lint-free cloth moistened with 99% isopropyl alcohol prior to applying any graphics
- ✓ Wipe the panel in a single (non-circular) direction
  - This helps to ensure that fine particles, smudges, or fingerprints do not affect your final print

### Routine Surface Cleaning (After Installation)

- ✓ Panels should be washed periodically to keep them clean, bright and dirt free
- ✓ Solvents such as alcohol, mineral spirits, naphta and xylene can be applied with a soft, color-free and lint-free cloth
  - Never soak panels in solvents
