

Thermolite™

Thermolite panels are constructed with an insulating foam core sandwiched between two corrugated, stabilizers and finished aluminum sheets.

Available in smooth or stucco-embossed finishes in a variety of durable colors, Thermolite panels add a highly decorative and durable surface with excellent insulating properties.

Thermolite panels are lightweight, easy to handle, and quick to install. This is the perfect solution for fitting into 1-inch insulating glass curtain walls and storefront extruded molding systems. Panels can be fabricated on-site using standard carpentry tools or factory-cut to meet your exact specifications.

Recommended Applications:

- Curtain walls
- Opaque glazing
- Storefronts
- In-fill panels
- Schools
- Spandrels
- Soffits
- Partitions
- Sunrooms

The photos below show one of our panned edge panels. These panels are required in installations where insulated panels must be butt-glazed. The metal wrapped edges provide metal to metal adhesion for proper sealing.
